

We understand your trade!

The ideal organization software for handcraft enterprises.

Show others, how it`s going!

In your everyday work life, appointments and projects have to be planned, customer and employee data managed and orders coordinated. With sellify, you have a real competitive advantage, because this software provides a central and clear organization during operation, so that everything is easier for you. This saves you a lot of time, nerves and money.

The multitool for your company.

Calendar Management

Organization, delegation and tracking of activities and deadlines

Project management

Control of projects and offer tracking

Document templates

Writing and organizing documents and e-mails

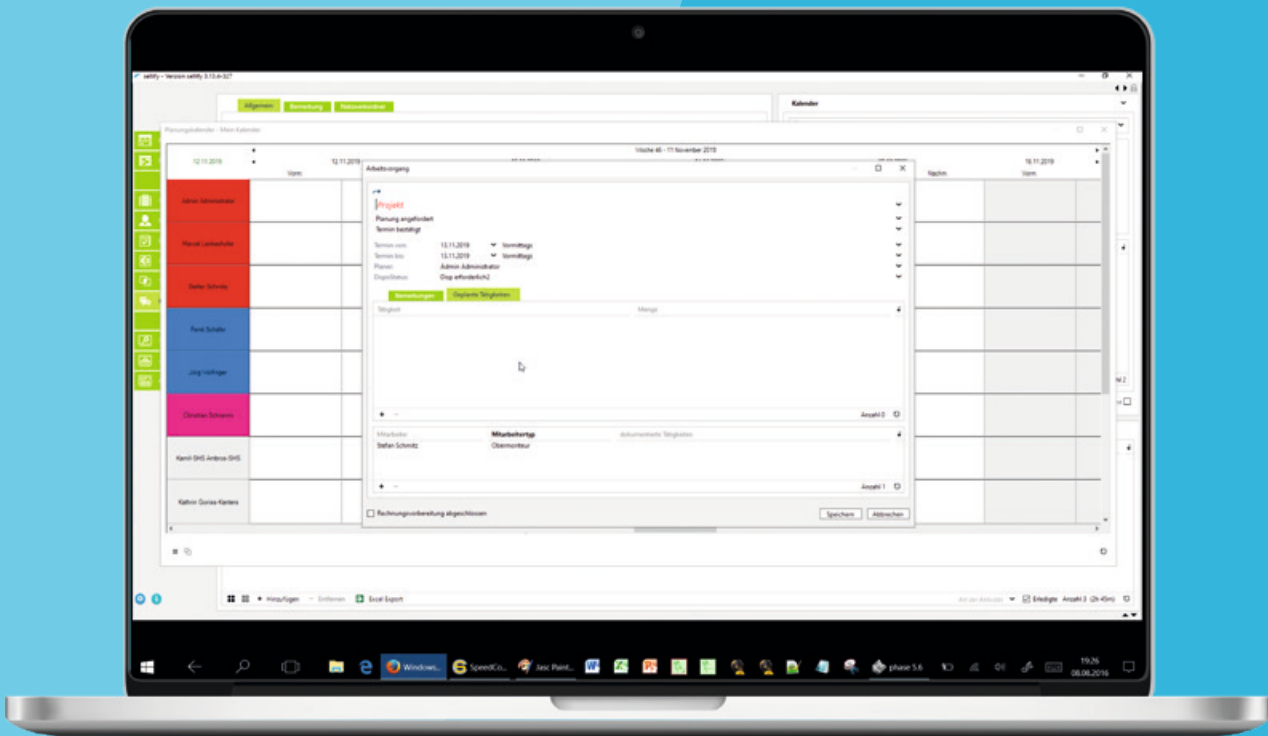

Document storage

Organization of shared storage in sellify or the network folders

Your blueprint for perfect appointment organization.

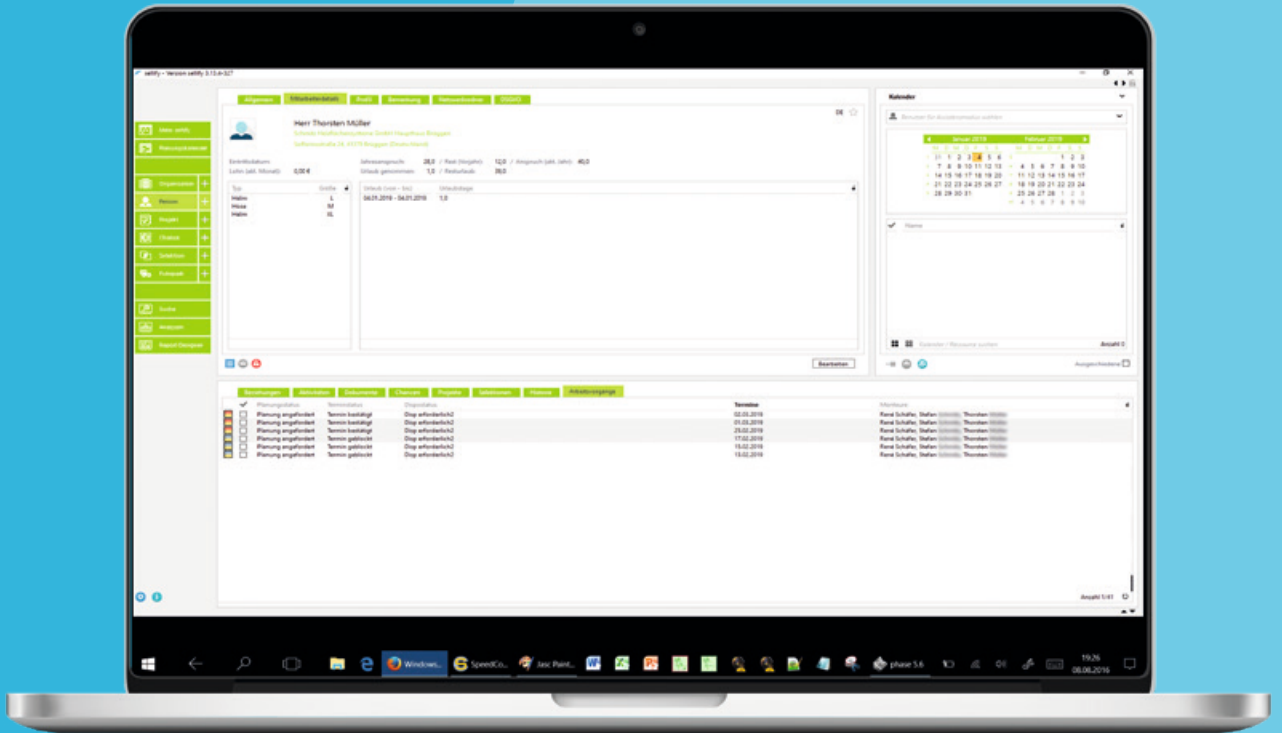

You have to coordinate several appointments with different customers? With the sellify planning calendar, you always have an overview and can ideally coordinate your employees. The activities performed are later documented in sellify - as a basis for invoicing and for optimizing following workflows.

Your tool for optimal employee management.

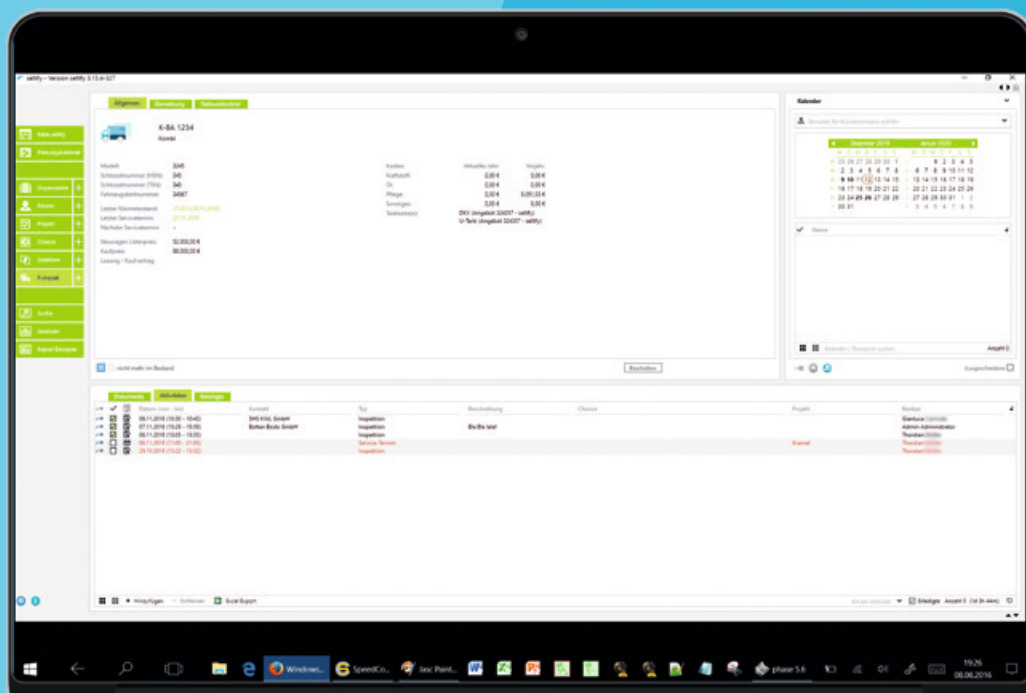

Be it personal employee data, information on the size of work clothes or vacation information. With sellify you always have all employee details in view. For employees working on an hourly basis, the monthly salary is calculated directly based on the activities performed.

Your key to successful fleet organization.

Get in: sellify helps you to keep track of your current company vehicles. You will be reminded of due service appointments, get an overview of running costs and can view mileage, fuel and all general data such as model, purchase price and key number.

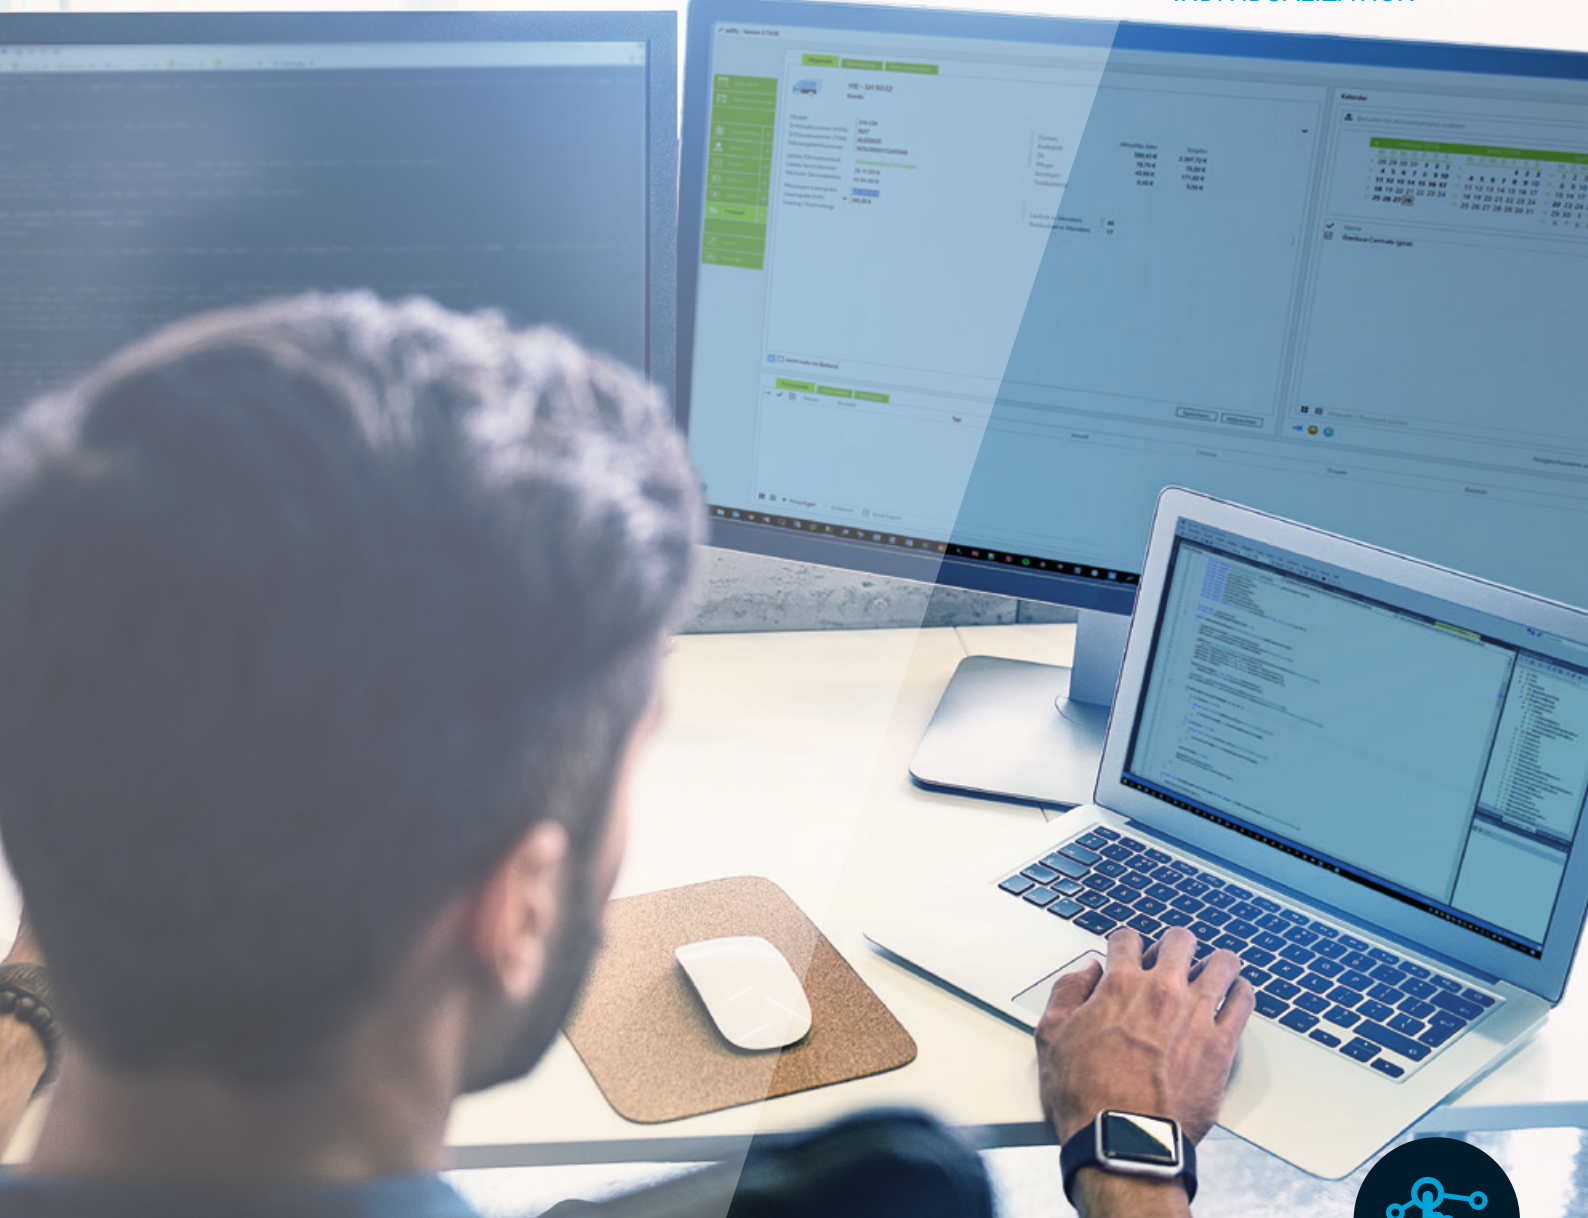

The sellify modular principle.

sellify is equipped with everything you need to make your everyday work easier and more efficient. Of course, our product portfolio includes many useful add-ons that you can add at any time.

And if you need something "tailor-made", we have a solution for you: Because, unlike many standard systems, sellify provides you with software that flexibly adapts to your processes and requirements. We offer you numerous possibilities for individualizing sellify, e.g. by developing desired functions or configuring new interfaces to third-party systems.

Put wood behind the arrows!

sellify is a particularly intuitive software that guarantees best usability.

We have designed each application in such a way that all information is always only a maximum of one click away. This allows users to use sellify quickly, even if they have never worked with an organization software before.

With the sellify//onTour module, sellify can also be used on the road.

Your employees can thus update project statuses or add customer data directly on the spot. No more information is lost! You want to learn more about sellify? Then contact us or get more information online at sellify.de/en
